

Google Analytics Setup Guide

Step 1: Create a Google Analytics Account

1. Go to [Google Analytics](#).

2. Click on Start Measuring to begin the setup.
3. Enter your Brand/Website Name under “Account Name.”

4. Configure Account Settings (recommended options):
 - a. Uncheck Google products and services.
 - b. Check Modeling contribution and business insights.
 - c. Check Technical support.
 - d. Check Recommendations for your business.
5. Click Next to proceed to property setup.

Step 2: Set Up a Property

The screenshot shows the Google Analytics 'Create a property' interface in a Chrome browser. The browser's address bar shows the URL: analytics.google.com/analytics/web/#/a164042081p481462084/admin/account/create. The page has a top navigation bar with the Analytics logo and a 'Back' link. Below this is a progress bar with five steps: 1. Account creation, 2. Property creation (current step), 3. Business details, 4. Business objectives, and 5. Data collection. The main heading is 'Create a property', followed by a subheading: 'To measure your web and app data, create a Google Analytics 4 property. Each property that you create holds all your measurement data for any selection of websites and apps that you choose.' The 'Property details' form contains the following fields: 'Property name (Required)' with the value 'DSO462 - Analytics', 'Reporting time zone' set to 'United States' (GMT-07:00 Los Angeles Time), and 'Currency' set to 'US Dollar (\$)'. A note at the bottom of the form states: 'You can edit these property details later in Admin'. At the bottom of the form are 'Back' and 'Next' buttons. The macOS dock is visible at the bottom of the screen with various application icons.

1. Enter a Property Name (e.g., “DSO462 – WebKit”).
2. Select your Reporting Time Zone and Currency based on your location.
3. Click Next and fill in your business details.
4. Click Next and set your business objectives:
 - a. Check all four:
 - b. Generate leads
 - c. Drive sales
 - d. Understand web or app traffic
 - e. View user engagement and retention
2. These goals provide a well-rounded analytics setup.
5. Click Create and accept the Terms & Conditions.

Step 3: Create a Data Stream

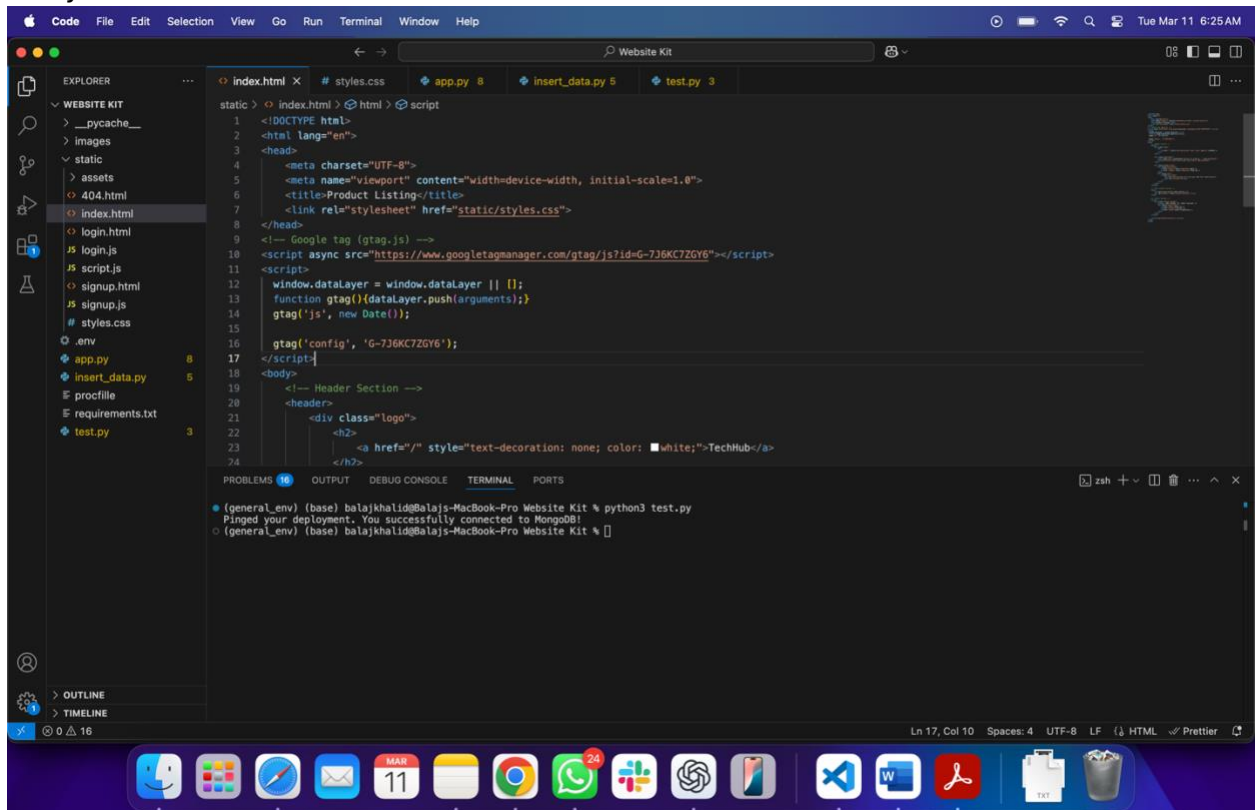

1. Choose your platform:
 - Web (for websites)
 - iOS App
 - Android App
2. Enter your Website URL and assign a Stream Name.
3. Click Create Stream to generate a Measurement ID.

4. Your next steps may vary depending on how your website is hosted.

Step 4: Install the Google Analytics Tracking Code

If You Have a Manually Hosted Website:

1. Copy the Global Site Tag (gtag.js) from the Web Stream Details page.
2. Open your HTML pages and add the tracking code inside the <head> section of every .html file:

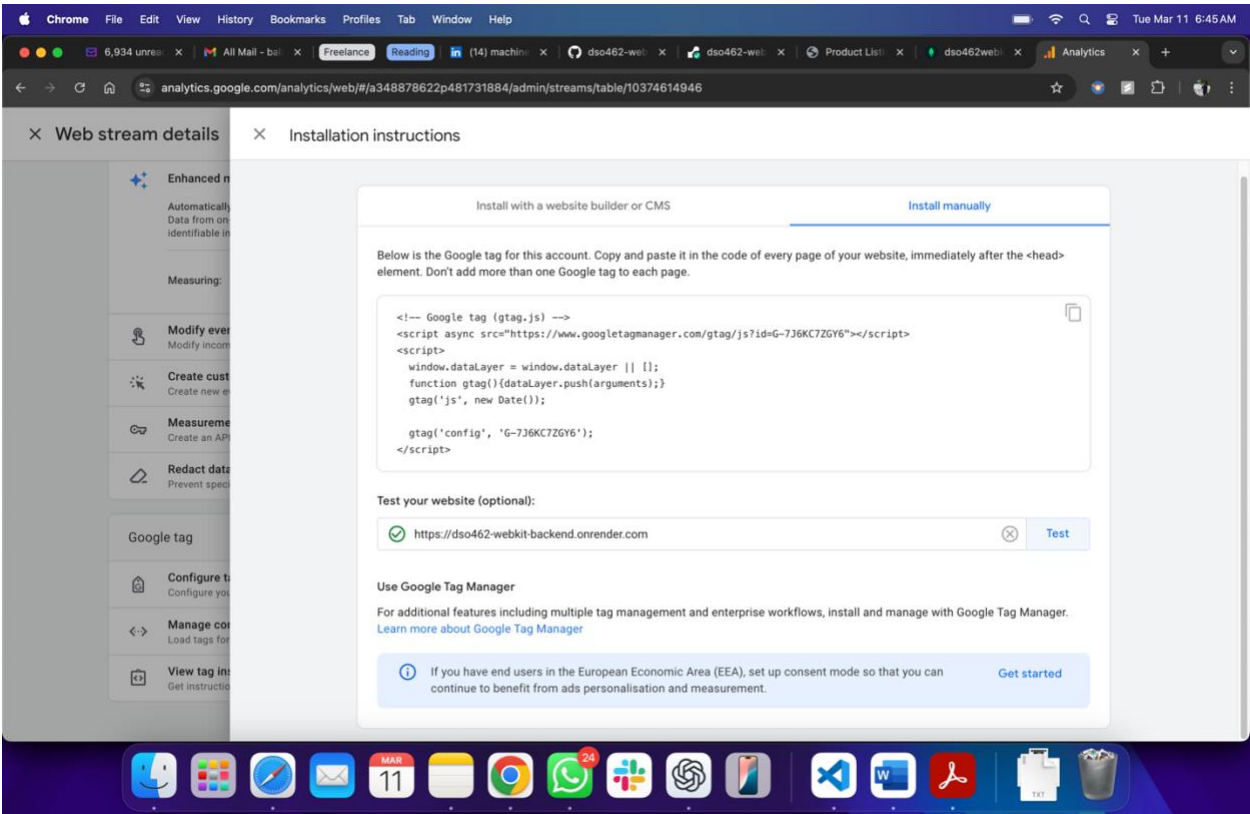

The screenshot shows a code editor with a file explorer on the left and a code editor on the right. The file explorer shows a project named 'WEBSITE KIT' with files like 'index.html', 'login.html', 'script.js', 'signup.html', 'signup.js', 'styles.css', '.env', 'app.py', 'insert_data.py', 'procfille', 'requirements.txt', and 'test.py'. The code editor is open to 'index.html' and shows the following code:

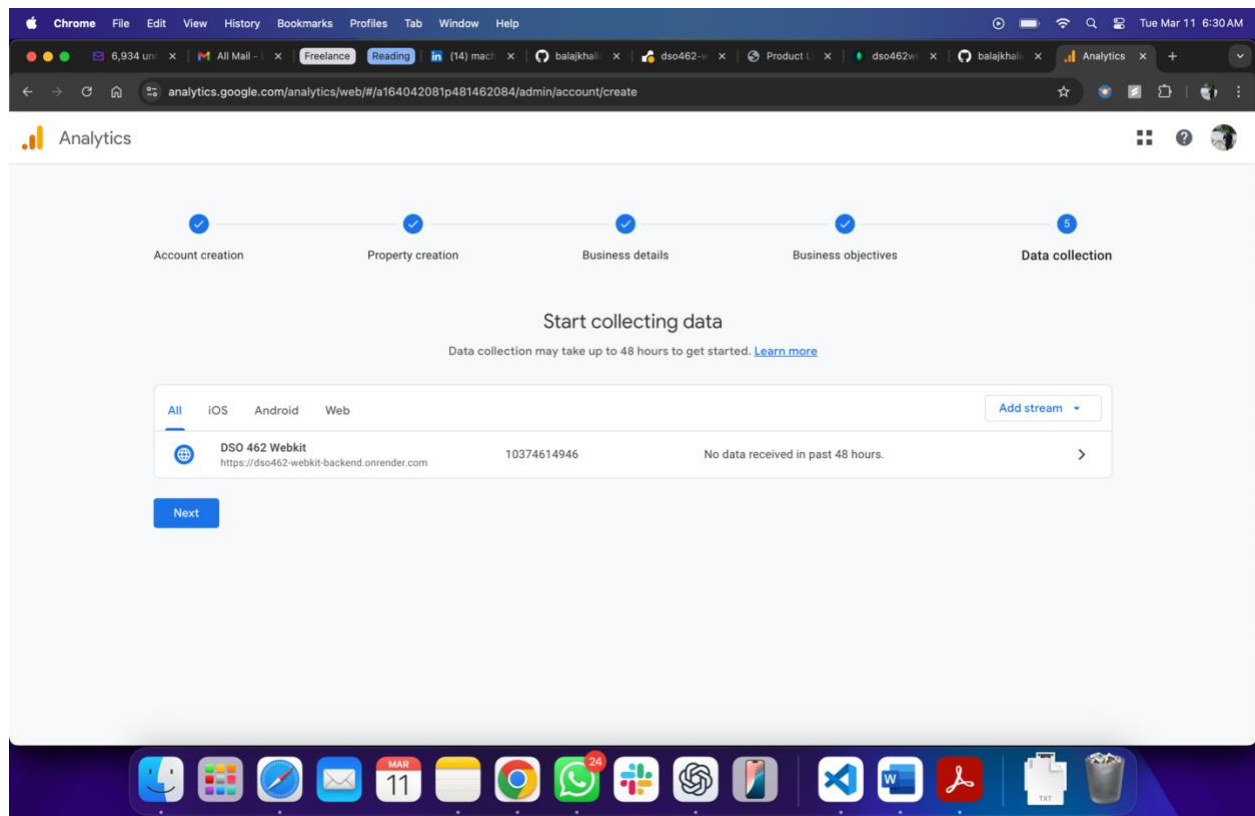

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4   <meta charset="UTF-8">
5   <meta name="viewport" content="width=device-width, initial-scale=1.0">
6   <title>Product Listing</title>
7   <link rel="stylesheet" href="static/styles.css">
8 </head>
9 <!-- Google tag (gtag.js) -->
10 <script async src="https://www.googletagmanager.com/gtag/js?id=G-736KC7ZGY6"></script>
11 <script>
12   window.dataLayer = window.dataLayer || [];
13   function gtag(){dataLayer.push(arguments);}
14   gtag('js', new Date());
15
16   gtag('config', 'G-736KC7ZGY6');
17 </script>
18 <body>
19   <!-- Header Section -->
20   <header>
21     <div class="logo">
22       <h2>
23       <a href="/" style="text-decoration: none; color: white;">TechHub</a>
24     </h2>
```

The terminal at the bottom shows the following output:

```
(general_env) (base) balajkhalid@Balajs-MacBook-Pro Website Kit % python3 test.py
Pinged your deployment. You successfully connected to Mongo008!
(general_env) (base) balajkhalid@Balajs-MacBook-Pro Website Kit %
```

3. Push the changes to your GitHub page and redeploy your website.
4. Wait a few minutes for the tracking tag to activate.

Step 5: Verify Tracking

1. Go to Google Analytics > Admin > Data Streams.
2. Open your Web Stream and click View Tag Instructions.
3. Install the Google Tag Assistant Chrome extension to verify the tag is firing correctly.
4. In Google Analytics, navigate to Realtime Report to check if data is coming in.

Step 7: Link Google Analytics to Other Google Services

For better insights, link Analytics with:

- [Google Search Console](#) – for SEO performance tracking.
- [Google Ads](#) – for ad performance monitoring.
- [Google Looker Studio](#) – for advanced reporting and data visualization.

Final Step: Start Analyzing Your Data

1. Use Audience Reports to understand user demographics.
2. Check Acquisition Reports to see where your traffic comes from.
3. Monitor Behavior Reports to analyze user interactions on your site.

4. Set up Conversion Tracking to measure key business goals (e.g., purchases, form submissions).
